

# Mobile Tracking Devices

Cover larger areas of an event or site with greater flexibility and security.

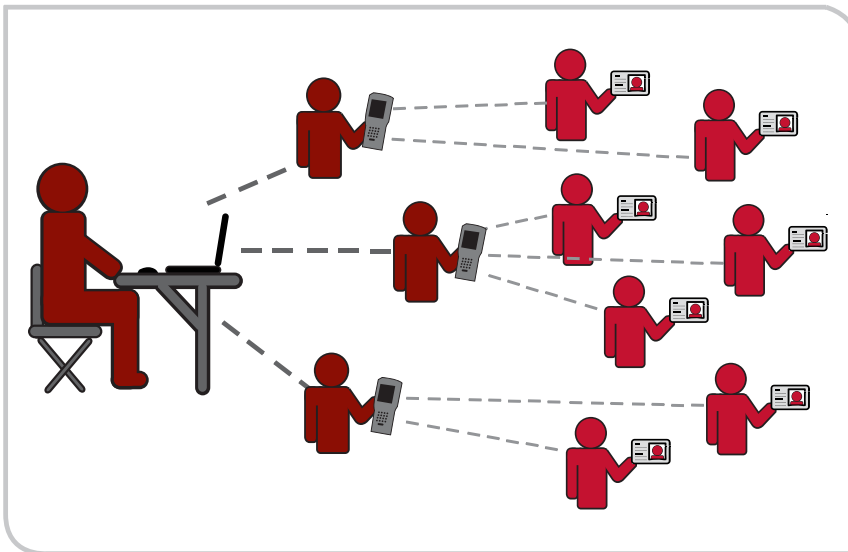

## How Does a Handheld Device Enhance Mobile Solutions®?

A Mobile Tracking Device allows users to manage personnel, visitors, volunteers and assets away from the Command Center at any location. Create an event and enroll personnel before the Command Center is setup onsite by using a Mobile Tracking Device. Personnel are able to manage larger areas of a location while moving in and out of the vicinity of the Command Center by tracking individuals, equipment, and activity using Mobile Solutions® software.

## Track Personnel

Multiple Mobile Tracking Device units provide users the flexibility they need to manage a site quickly and securely. Each unit is able to transmit data in real-time using a wireless connection or can be uploaded directly to the Command Center with a USB Connection. Mobile Tracking Devices have the capability to support virtually all formats including 1D & 2D barcodes, QR tags, and MiFare, Moca, DesFire and Magstripe cards. Mobile Solutions™ web based software is compatible with Apple, Android and Windows operating systems. Mobile Tracking Device units are an effective, affordable mobile solution for both small and large organizations.

## Mobile Tracking Device Features

- > Track people and assets away from the command workstation.
- > Create an event and enroll people on-site before the command workstation is setup.
- > Wirelessly connect to the command workstation by transmitting data in real-time.
