

# Proactive Protection Against Concealed Threats for Employees

Corporate offices are not immune to acts of violence.

Recent workplace shootings serve as a sobering reminder of the need for a layered, modern security approach. Evolv's concealed weapons detection technology is one tool to help reduce risk by identifying threats as they enter your building, without disrupting the daily flow of business. Evolv can help strengthen your security posture, add peace of mind, and mitigate the potential for tragedy while preserving a welcoming environment.

## Flexible Deployment for your Entry Points

Our solutions are designed to meet the unique needs of corporate environments. At high-traffic street-level lobbies, they enable unobtrusive screening as employees and guests move from the entrance to elevator banks. For smaller access points, such as side entrances or garage-level doors, they provide compact, efficient screening. This flexibility allows for protection across all access routes while still maintaining convenience and aesthetics.

## Integrated Intelligence for Smarter Security

Our technology integrates with your existing security ecosystem, including video management systems (VMS), access control platforms, and Security Operations Centers (SOCs). Real-time alerts and data sharing enhance situational awareness and enable coordinated response. With our Open API, your team gains centralized visibility and control helping you make quicker, more informed decisions in the moments that matter most.

### MSRP Bundle Subscription Details:

- Screen people and bags for concealed threats.
