

MyEvolv & Evolv Insights®

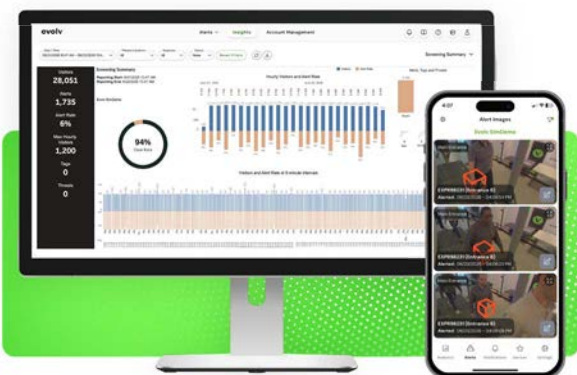

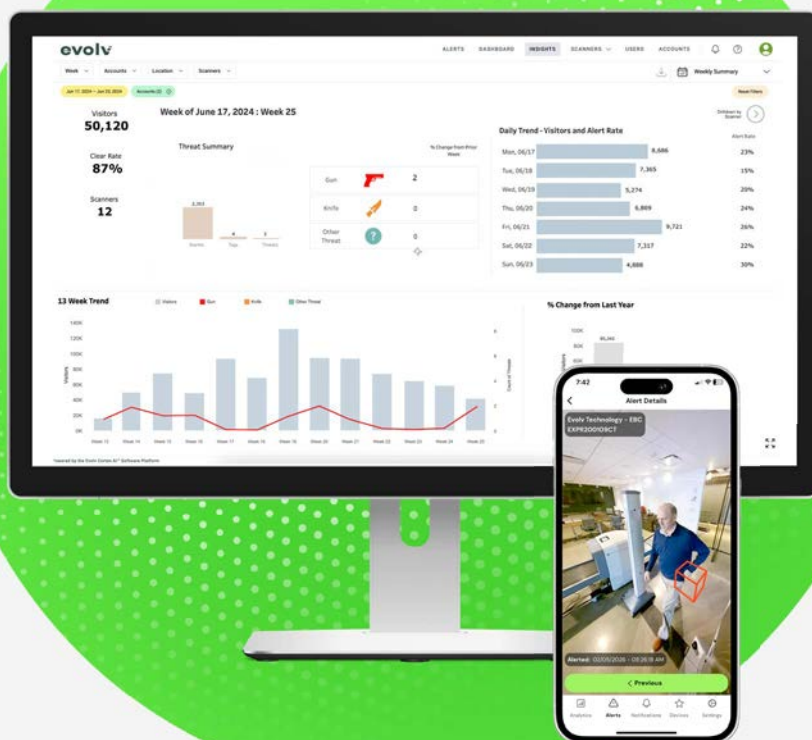

Monitor, Analyze, and Manage your Security Screening

Connected devices have become central to how organizations operate. Security screening should be no exception. Yet many screening solutions still operate in silos. Making changes or accessing data often requires being onsite, and visibility into performance can be limited or delayed. Without a centralized, real-time view, it's difficult to fully understand how your screening is performing.

MyEvolv brings your screening infrastructure online, giving you complete visibility and control across your entire Evolv deployment from anywhere. Monitor live performance, analyze trends over time, and make configuration changes in real time without having to be on-site.

Monitor: Stay Ahead of What's Happening

When something critical is detected, you need to know immediately. MyEvolv delivers real-time notifications to your phone or email with details so you can act fast. Within the app, you can review images and a complete record of each event. See when a staff member logs a found item, when system settings change, and how your screening operation is performing as it happens. Live screening views give you an at-a-glance picture of both throughput and alerts across your deployment.

Analyze: Turn Activity Into Insight

Security leadership needs more than instinct, they need data to back decisions, support proposals, and demonstrate performance. And when an incident requires investigation, they need clear, reliable documentation.

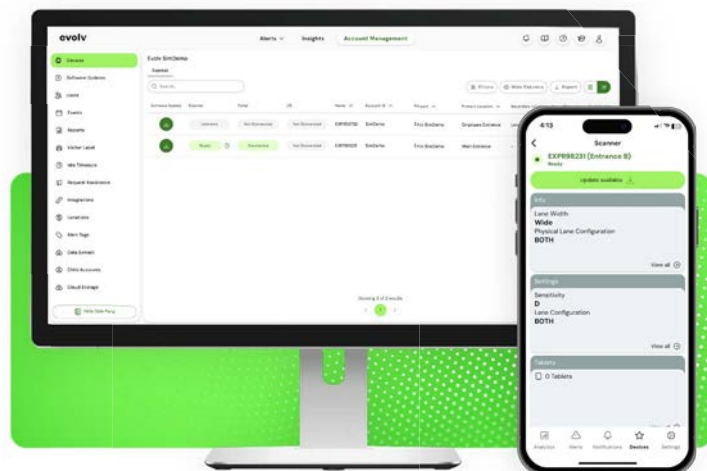

Evolv Insights brings that information together in one place within MyEvolv. Track visitor counts, flows, and alert activity across your deployment, and monitor system performance to spot trends and understand what's happening across locations. Rather than relying on assumptions, you have the data to explain outcomes and justify decisions with confidence.

When an alert requires a closer look, images and event details are readily available to support your investigation. And because your data belongs to you, MyEvolv makes it easy to take it further, download reports for presentations and proposals, or integrate directly with your existing analytics tools via API.

Manage: Control Your Deployment From Anywhere

Managing your screening deployment doesn't require being on the ground. With MyEvolv, authorized users have full administrative control from anywhere. Adjust sensitivity settings on the fly and push updates across multiple scanners from a single interface. Sensitivity changes are immediately sent to the Evolv Express, while software updates are downloaded ahead of time and installed automatically during a scheduled maintenance window, so systems can update in off-hours without interrupting screening.

Integrate

MyEvolv doesn't operate in isolation. Through an open API, you can bring Evolv data, including alerts and images, directly into your broader security ecosystem. Connect with visitor management systems, security information platforms, and other tools your team already relies on, creating a unified operational picture across your entire security infrastructure.

You can't be everywhere at once, but with MyEvolv, you don't have to be. From your desk or your pocket, you have the visibility, control, and data to run a smart, responsive screening operation from anywhere.

Customer Quotes

"We are using the [Evolv Insights®] reporting, so we pull that [data] every night and share it with our leadership team to show the progress we've made over the year. Actually, based on those numbers we closed down another smaller secondary entrance because so many guests were now coming through Evolv at the front of the building."

Vice President, Event Services at Footprint Center

"Now I have data, and data is power in my eyes. I can tell you one month I had 17,000 people come through and one of my EDs, never in my life when I thought that many people came through there. Now we do. We got that first monthly report and we saw the amount of knives, the amount of firearms that we were picking up. We thought 'Wow, this system is amazing.'"

Director of Public Safety, Technology, and Community Based Care at Lee Health

"We sat down with our security team and looked at the data, when people were coming in, when the rush hit, and how it changed over time. That's helped us adjust staffing, add or remove units based on demand, and make smarter decisions for future games."

Vice President of Operations and Security for the Philadelphia Phillies

About Evolv Technology

Evolv (NASDAQ: EVLV) is designed to transform human security by helping organizations detect potential threats, mitigate risk, and enhance safety using AI-powered security solutions with robust insights. Our technology has helped to create efficient and positive security screening experiences for the world's most iconic venues and companies as well as schools, hospitals, and public spaces. Evolv's mission is to create a safer world to live, work, learn, and play. Evolv's advanced systems have scanned more than 4 billion people since 2019. Evolv Express® and Evolv eXpedite™ have been awarded the U.S. Department of Homeland Security (DHS) SAFETY Act Designation as a Qualified Anti-Terrorism Technology (QATT). Evolv and its products have been awarded numerous awards which can be viewed on our [Certifications and Awards](#) web page. Evolv®, Evolv Express®, Evolv Insights®, and Evolv eXpedite™ are registered trademarks or trademarks of Evolv Technologies, Inc. in the United States and other jurisdictions.
